Obligations

For

Working on or Near the Tramway
1. Introduction

This document:

- Provides the necessary information about the procedures that need to be followed in order to obtain authorisation to undertake works on or near the Edinburgh Tram System and to provide advice on protection of the tram infrastructure.
- Defines the process to be followed by external and internal parties to ensure the safety of their employees and that the structural integrity of the tram infrastructure is protected and maintained.
- Applies to all sections of track. The applicant should note that an application may require to be deferred to avoid interference and or disruption to the Edinburgh Tram operation.
- Should be read in conjunction with other guidance available on the City of Edinburgh Council (CEC) website relating to applications for consent to excavate the road, construct footway dropped crossings, road occupation, scaffolding, tower cranes, hoists, mobile cranes, cherry pickers and hi-abs.

In order to ensure that work on or near the tramway is carried out safely, it is necessary to obtain authorisation from Edinburgh Trams and agree a safe system of work before the work starts. Application for Authority to Work (AtW) must be accompanied with a documented safe system of work including Method Statement, Risk Assessment and where applicable Traffic/Pedestrian Management Plan.

The safe system of work must recognise and take cognisance that the contractors have considered the impacts of working on or near the tram lines and live power cables. Failure to do so may mean the work will be suspended.

Unauthorised work can be dangerous and is contrary to the Edinburgh Tram Byelaws, New Roads and Street Works Act (Scotland) 1991 Section 152, and the Health and Safety at Work Act and may be subject to a penalty fine under Byelaw 10 of the Edinburgh Tram Bylaws.

It is the relevant parties’ responsibility, to ensure that they have in place, adequate and appropriate safe systems and processes to identify and manage any associated risks, plan and control their works on or near the tramway, in line with this document and current Health and Safety legislation.

Any employee, contractor, subcontractor or persons under their control must be aware of the risks and hazards identified within or adjacent to the worksite and must comply with the agreed safe system of work and the obligations identified within this document.
2. Purpose

The purpose of this document is to ensure that for any work carried out adjacent to the tramline taking full cognisance of:-

- the risk of injury to the public, contractors, Edinburgh Trams’ staff and others caused by moving trams, live overhead line equipment, structural weakening and the work itself is adequately controlled while work is being carried out on or near the tramline
- the risk of damage to trams, the Edinburgh Tram Network and third party property caused by the method of working and the equipment associated with the work and the worksite is adequately controlled
- the structural integrity of the Edinburgh Tram Network is not compromised
- the disruption to the tram service caused by works on or near the tramline is minimised
- there are no undue delays or restrictions to work being carried out on or near the tramline caused by Edinburgh Trams’ processes, particularly if the works are associated with an emergency, and
- adequate advice and assistance is readily available from Edinburgh Trams to those wanting to work on or near the tramline

3. Scope

The scope of this document covers all work (including emergency works) that might have an effect on the operation or infrastructure of the Edinburgh Tram Network; such work includes work carried out by, or on behalf of third parties and their contractors, CEC, utility companies, Edinburgh Trams and occupiers of properties adjacent to the tramline. It details how work must be planned, co-ordinated and authorised.

| Hot Work Permit             | Hot Work Permits are required when any hot work, that is any activity or process that generates a flame, heat or an incendive spark and introduces (or presents) a foreseeable risk of fire or explosion through a source of ignition by means of tools or equipment either:  
  - Intentionally arising from working methods (with or without the use of a naked flame) such as welding, flame-cutting, soldering, brazing; or  
  - The unintentional generation of heat or sparks, by the use of power/hand tools e.g. grinding and the use of disc-cutters.  
  
  The intention of the Hot Work Permit is to check that certain actions and precautions are in place to reduce the risk of a fire occurring as a result of a hot process. |

5. Responsibilities

5.1 Edinburgh Tram (ET)

Is the Duty Holder for the Edinburgh Tram Network, as defined in ROGS, Edinburgh Trams is responsible for ensuring that risks to the tram infrastructure, Edinburgh Tram Network’s operation or injury to persons thereon as a result of works taking place on or in the vicinity of the tramway, are adequately mitigated.

5.2 The Applicant

The applicant must, when planning any works on or near the Edinburgh Tram Network provide the following;

- Give adequate details of the intended works and allow sufficient time for Edinburgh Trams to coordinate the work and ensure all potential safety and operational issues have been considered. A minimum of 21 working days’ notice prior to work commencement is normally required.
- Requests for an AtW for planned works should be made at least 21 calendar days before work is planned to start so adequate time is available to coordinate the work and ensure all potential safety and operational issues have been considered.
- Obtain all necessary CEC permits and other third party permissions.
- Supply supporting information for all AtW requests.
- Cooperate with Edinburgh Trams to plan and coordinate AtW requests.
- Attend Gogar Tram Depot prior to starting works on site, to sign on to the AtW.
6. Procedure

6.1 Principles

The Edinburgh Trams’ AtW, and the requirements of the processes associated with it, is additional to any requirements (e.g. Health and Safety, NRSWA, CEC Permits, SRWR) that someone wanting to carry out work would have to meet if there was no tramline in the vicinity.

The AtW is the document that indicates that the person carrying out the work has the permission of Edinburgh Trams to carry out specified works at a particular location and time. The Request, Safety Assessment and Access Authorisation elements of the form provide a record of discussions which will have taken place between Edinburgh Trams Engineering team, the applicant and any other relevant parties, prior to the forms being completed.

Where Edinburgh Trams need to authorise works on or near the tramway, [See Figure 1] the scrutiny of the request and the restrictions placed on the works will be commensurate with the risk to, or caused by, the Edinburgh Tram Network as a result of the works taking place. The approach will not be unnecessarily bureaucratic but will be sufficient to ensure that adequate mitigation of the risks is in place. Minor routine works (e.g. emptying of litter bins) may be authorised to be carried out as and when required for up to a year, while intrusive (e.g. adjacent lane occupations), or non-repetitive works (e.g. scaffold erection) will need to be authorised on a case by case basis.

For all work that requires an authorisation, the AtW must be issued prior to any work starting. For non-repetitive works, and works involving isolation of the overhead line, the AtW must be given up when the work is completed.

A hot works permit will also be required to be completed when said works are within 10 m of the depot building, substation, tram or any tramstop. Hot works within 10m of a tram is only permitted if the tram cannot be moved or the works are on board the tram itself.

The hot works form will be completed by the applicant and countersigned by Edinburgh Trams staff depending on the time and location.
7. When Authorisation is required for Planned Work

7.1 ETN Hazard Zone

The Hazard Zone defines the area within which there is the potential for coming into contact with the tramway infrastructure and is defined in the drawing below.

Authorisation is required for all work carried out within the Red Hazard Zone and other situations as described in points (a) to (i) below. Authorisation may be required for work carried out in the Amber Hazard Zone. If authorisation is required then the relevant party must obtain an Authorisation to Work from Edinburgh Trams.

Figure 1 – ETN Hazard Zone

**Red Zone:**
Work within this zone **will require prior authorisation** and will interface with the tram network. Work may require isolation of the network.

**Amber Zone:**
Work within this zone **may require prior authorisation** and may interface with the ET network or pose a risk of injury or fatality to persons.

**Green Zone:** Work within this zone will **not normally require prior authorisation**.

- The Overhead Line Equipment (OLE) supplies power to trams at **750v D.C.**
  It must be assumed that any overhead line equipment is live at all times.
  Cables attached to these structures must be considered to be live as well
NOTE: Metallic structures (temporary or permanent) including HERAS or similar fencing, scaffolding, welfare cabins may require an earth connection to prevent risk of induced voltages or in case of OLE failure.
Authorisation is needed for any of these activities:

a) Any work where any part of the site, any tools or materials, any machine, suspended load, or any person, could come within the ETN Hazard Zone

   NOTE: This could include deliveries to and from a site, although the site itself is out with the Hazard Zone.

b) Any work involving use of a ladder or window cleaning poles, where any part of the equipment could come within the space 2m measured horizontally to a point vertically above the nearest tramway rail.

c) Any work which will force traffic or pedestrians to be diverted onto a tram line (because of road or footway occupation)

d) Piling or excavation over 2m deep with a risk of rendering the roadway or the tramway unstable.

e) Any excavation within 3m of any tramway structure including poles and spanning wires supporting overhead wires.

f) Erecting and dismantling scaffolding or use of a crane, within 5m of the nearest tram rail or overhead wires including spanning wires.

g) Any work where any structure or equipment will be placed above the overhead line.

h) Even if the site itself is outside the 2m distance from the nearest tram rail, authorisation will still be required if vehicles fitted with cranes, tipping bodies or skip loaders could come within this distance when this equipment is in use.

i) Authorisation is also required if abnormal vehicle loading or static loading is placed on the track.
7.2 Building Fixings

The overhead wires within the city centre are attached directly to buildings rather than to separate poles. These fixings and the supporting wires MUST not be disturbed without prior agreement.

Individual fixings are covered by Building Fixings Agreements between The CEC and the individual building owners and should be referred to if planned works will interfere with the fixings.

7.3 Authority to Work Request

To apply for authorisation for any works in proximity of the Hazard Zone, an AtW request must be submitted 21 days prior to the works in the first instance saying when and where the work will be carried out, and describing the work to be done.

This document can be downloaded at: https://edinburghtrams.com/information/atw

Further information in regard to working in proximity to power lines and cables can be obtained from the HSE, Guidance Note GS6 ‘Avoiding Danger from Overhead Power Lines’.

An AtW request must be submitted by the applicant to Edinburgh Trams at: requests@edinburghtrams.com

This will set out the planned work activities and this must detail the measures to be taken to avoid damage to the infrastructure, secure safety of staff operatives and other persons by minimising interference with tram operations and include supporting documentation such as method statements, risk assessments and traffic management plans.

Edinburgh Trams may wish to contact the Applicant to discuss the submission or to arrange a site meeting. This will automatically be the case if the works appear to Edinburgh Trams to require an isolation of the overhead line equipment. This meeting will be arranged by the relevant CEC Roads Team and will be attended by a competent person appointed by the applicant. The purpose of a site meeting will be to discuss and agree the safe system of work prior to authorisation being given.

If as a result of this meeting, the Applicant has to meet any specific requirements, they must ensure that they have understood the precautions they agree to take.

The application should be submitted in advance of any work being scheduled unless it is defined as emergency works under the New Roads and Street Works Act (Scotland) 1991 (NRSWA) in which case contact should be made as soon as possible with the Roads Authority and also Edinburgh Trams Control Room - 0131 622 8910
For non-emergency schedules works under the New Roads and Street Works Act (Scotland) 1991, the relevant Statutory Utility Company should follow the process to obtain authorisation to work on or near the tramway as set out in this guidance.

When a safe working method has been agreed, Edinburgh Trams will issue an AtW.

The applicant may also require additional permits as prescribed in the Roads (Scotland) Act 1984 for road occupation. Should the Roads Authority permit be refused for the dates applied then the Applicant will be required to contact the Edinburgh Trams to review and re-schedule the dates when they will carry out the works.

The Roads Authority permit will be conditional on receipt of an AtW issued by Edinburgh Trams. The applicant should; therefore, be familiar with other timescales associated with Roads Authority permits for occupation of road or footway.

Applicants should note that all works on or near the tram lines is dependent on ensuring there is minimal impact on the tram operation. Any intrusive works that may impact on the tram operation by a third party may be refused or deferred.

To request an AtW, the applicant is required to complete the AtW form in line with the guidance given in Appendix A. Once complete, the request should be submitted to Edinburgh Trams electronically but may be sent in hard copy; appropriate addresseees are given in Appendix B. Any relevant supporting documentation (such as method statements, risk assessments, site plans, traffic management plans) should be submitted at the same time.

On receipt, Edinburgh Trams’ Engineering Representative will review the request and decide how the request should be dealt with. Examples of types of work and how they might be dealt with are given in Appendix C.

Requests for an AtW for planned works should be made at least 21 calendar days before work is planned to start so adequate time is available to coordinate the work and ensure all potential safety and operational issues have been considered.

On agreement of an AtW, The applicant will be required to visit Gogar Tram Depot prior to starting works on site, to sign on to the AtW.
7.4 Works requiring Isolation and Earthing of the Overhead Line

Where work requires isolation and earthing of the overhead line, the isolation and earthing will be carried out in accordance with the requirements of Edinburgh Trams isolation procedure.

7.5 Emergency Works

By their nature, Emergency Works need to be executed in a manner which does not usually allow for the strict scrutiny normally expected prior to works starting. The work must still be carried out with minimum risk to those carrying out the work, the general public, vehicles and infrastructure.

For Emergency Works on or near the Tramway, the Applicant will contact ET Control Room; as soon as possible. Typically this would be before arriving on site but it should be done before any intrusive work starts.

7.6 Damage to ET Infrastructure

Anyone working on or near the tramway that causes unintentional contact with any tramway infrastructure must advise Edinburgh Trams Immediately.

7.7 Hot Works

Hot Work Permits are required when any hot work, that is any activity or process that generates a flame, heat or an incendive spark and introduces (or presents) a foreseeable risk of fire or explosion through a source of ignition by means of tools or equipment either:

- Intentionally arising from working methods (with or without the use of a naked flame) such as welding, flame-cutting, soldering, brazing; or
- The unintentional generation of heat or sparks, by the use of power/hand tools e.g. grinding and the use of disc-cutters.

The intention of the Hot Work Permit is to check that certain actions and precautions are in place to reduce the risk of a fire occurring as a result of a hot process.

Any hot works should be identified on the application form and detailed in the attached method statement and risk assessment.
Appendix A Guidance to completing Form

The applicant only needs to complete sections 1 to 7 initially. The remaining sections will be completed by Edinburgh Trams in conjunction with the applicant. All supporting documentation should be submitted with the request.

The applicant should answer these questions based on their knowledge of the work:

1. Who are you? Name
2. Position
3. Contact No.
4. Email

The applicant should answer these questions based on their knowledge of the location of the worksite and planned dates.

Details will be confirmed as the application progresses.

A Person in Charge must be nominated and named here. Contact details must also be provided.

These sections are intended to give the reviewer an initial understanding the impact on Edinburgh Trams of the proposed works.

The applicant should answer these questions based on their knowledge of the location of the worksite and planned dates. Details will be confirmed as the application progresses.

This section should be used to add any relevant information e.g. previous occasions when the task has been done next to the tramway, additional documentation supplied e.g. site photographs.

The (AtW) number is the unique reference number for the application which will be generated by ET.
